## Transporter Persona

1. Transporters access their ATRs, account information, and application preferences through the Humane Transport mobile, web, and desktop applications.
2. Transporters are only capable of viewing, adding ATRs, modifying information and preferences of their own accounts, as provided by the mobile, web, desktop applications.
3. Transporters accounts are protected by their username and password identification; account information are encrypted on any database(s) that interact with the mobile, web, desktop applications
4. Data sent by Transporter actions on the mobile, web, desktop applications are encrypted, both communication and data, when exchanged between Humane Transport-identified software systems, databases, etc.

Transporter
[Person]

A Canadian Livestock Transporter, with an account

Inspector/Receiver Personas

These personas do not directly interact with the Human Transport mobile, web, or desktop applications. These personas receive emails with ATRs, the emails are as secure as the email system is - the content of said email are controlled by the Transporter sending it.

Inspector
[Person or Party]

A person or party who inspects the livestock transported and relevant documentation

Receiver
[Person or Party]

A person or party who receives the livestock from the Transporter

Admin Persona

1. General administration activities include administration over Transporter ATRs and account information through the Humane Transport administration application. Account information that may be modified includes Transporter name and other designation fields. ATRs are entirely read-only.
2. The intent of the administration application is to control the addition of new transporters: at the time or writing, no such application is intended to be completed.
2. Special administrators may administer other Admin accounts and permissions. Similarly to the above, special administrators are capable of viewing, adding, and modifying Admin accounts as provided by the admin application.
3. Admin accounts are protected by their username and password identification; account information are encrypted on any database(s) that interact with the administration application.
4. Data sent by Admin actions on the admin application are encrypted, both communication and data, when exchanged between Humane Transport-identified software systems, databases, etc.

Admin
[Person]

An administrator of Transport accounts

Persona Role-Based Access/Security Provisions for Humane Transport Application

Identifies and describes personas' role-based access/security provisions within the Humane Transport applications
